RESULTS	#TC's
Pass	7
Fail	3
Block	0
Total	10

ISSUES FOUND
[Banco de Séries] Add a series from "Mais Assistidos da Semana" into a list options failed
[Banco de Séries] Classifying Series by letter is not filtering as should
[Banco de Séries] Validate the application accessibility failed

IMPORTANT NOTES
- The execution was performed on Chrome and Firefox web browsers on Desktop and a Chrome browser in Motorola One Vision smartphone.
- The next step is to validate the bug after been fixed by development team.

RESULTS ANALYSIS
After executing some of planned test cases, 3 inconsistencies were found and reported. In general, the basic functionalities do not have any critical or blocking bug that would impossility the system user. Therefore, some inconsistencies that affect the system use flow and it is highly recommended more tests executions with more complete test suite as described in the test plan adding API testing and white box testing. Then, the coverage will increase and the quality will be guaranteed according to the business plan after inconsistencies be fixed and retested in a new release before the delivery to client.
